

Unprecedented Chilling Line Automation

Birdseye® Controls System

The Birdseye poultry chilling system from Morris represents the latest generation of our industry leading software technology. Birdseye provides an easy to use, touchscreen interface allowing operators the ability to effectively manipulate the entire Morris poultry chilling line. System views of rocker and auger chillers give the operator instant feedback of chilling equipment status. Readily accessible displays and controls provide real-time data such as chilling water temperatures and evaporator pressures, and positive control of key system components. The back-lit screen is easily viewed in any production environment. Complete Morris chilling line operation at the touch of a screen.

- Automated chiller operation
- Predictive analytics
- CIP validation
- Email alarms
- Mechanical controls bypass
- Morris remote support capable
- Compatible with customer network
- Recipe presets
- On-board troubleshooting schematics
